

Rotary and Handling Tools Catalog

2013 Land and Offshore

NATIONAL OILWELL VARCO

GENERAL INFORMATION

This catalog is intended to provide general information. Every effort has been made to ensure the accuracy of the information contained herein. National Oilwell Varco, L.P. and its associated and affiliated companies (hereinafter collectively referred to as "NOV") will not be held liable for errors in this material, or for consequences arising from misuse of this material.

GENERAL INFORMATION

About this issue

This book is the 2013 version of the catalog.

This issue contains information about new products like the Bottom Hole Assembly Tool (BHAT), Slip Lifting Tool (SLT), Landing String Slip (LSS), Master Bushing Heavy Duty (MBH), Landing String Bushing (LSB), several RST's, BX7, SBS, DSJX, BX4-35 etc.

Patent info

Products in this catalog are covered by (but not limited to) the following patents:

US6,845,814 B2; WO03060280; US6,896,048; US 6,896,048; WO2005059299; GB2004/003413; US6,997,265 ; USSN 10/807,642; US2005/0216981; EP1475512; US6,443,241; US6,527,493; US6,691,801; US6,637,526; US6,938,709; WO.03/025444; WO.03/054338; WO2005045177; US6,82,632; WO2005106185; US7,510,006; US. 7,591,304

Original instructions

The Original Instructions can be found on www.nov.com/Drilling/Handling_Tools.aspx

Product information bulletins & safety alerts

All bulletins and alerts are available from www.nov.com/Drilling/Handling_Tools.aspx

Liability

This catalog is intended to provide general information. Every effort has been made to ensure the accuracy of the information contained herein. NOV will not be held liable for errors in this material, or for consequences arising from misuse of this material.

Copyright info

This publication is the property of, and contains information proprietary to NOV. No part of this publication may be reproduced or copied in any form, or by any means, including electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of NOV.

Special information: Detailed descriptions of standard workshop procedures, safety principles and service operations are not included. Please note that this catalog may contain warnings about procedures which could damage equipment, make it unsafe, or cause PERSONAL INJURY. Please understand that these warnings cannot cover all conceivable ways in which service (whether or not recommended by NOV) might be done, or the possible hazardous consequences of each conceivable ways. Anyone using service procedures or tools, whether or not recommended by NOV, must be thoroughly satisfied that neither personal safety nor equipment safety will be jeopardized.

All information contained in this catalog is based upon the latest product information available at any time of printing. We reserve the right to make changes at any time without notice.

Trademark info

NATIONAL, OILWELL, NATIONAL OILWELL VARCO, NOV, the NOV logo, EMSCO, IDECO, SKYTOP BREWSTER, CE, GRANT PRIDECO, PERFECTION, BOREMATCH, BAASH ROSS, VARCO BJ, and DYNAPLEX are trademarks of National Oilwell Varco, L.P. or its associated and affiliated companies.

Conventions; Notes, Cautions, and Warnings

Notes, cautions, and warnings provide readers with additional information, and to advise the reader to take specific action to protect personnel from potential injury or lethal conditions. They may also inform the reader of actions necessary to prevent equipment damage. Please pay close attention to these advisories.

 **WARNING:** A warning indicates a definite risk of equipment damage or danger to personnel. Failure to observe and follow proper procedures could result in serious or fatal injury to personnel, significant property loss, or significant equipment damage.

 **CAUTION:** A caution indicates that potential damage to equipment or injury to personnel exists. Follow instructions explicitly. Extreme care should be taken when performing operations or procedures preceded by this caution.

NOTE: A note indicates that additional information is provided about the current topics.

Illustrations

Illustrations (figures) provide a graphical representation of equipment components or screen snapshots for use in identifying parts or establishing nomenclature, and may or may not be drawn to scale.

Safety requirements

NOV equipment is installed and operated in a controlled drilling rig environment involving hazardous situations. Proper maintenance is important for safe and reliable operation. Procedures outlined in NOV User Manuals are the recommended methods of performing operations and maintenance.

WARNING: To avoid injury to personnel or equipment damage, carefully observe requirements outlined in this section.

General system safety practices

WARNING: Read and follow the guidelines below before installing equipment or performing maintenance to avoid endangering exposed persons or damaging equipment.

- Isolate energy sources prior to beginning work.
- Avoid performing maintenance or repairs while the equipment is in operation.
- Wear proper protective equipment during equipment installation, maintenance, or repair.
- Never weld on any parts of tools. The tools are produced from cast alloy heat threaded steel or forged material and must not be welded in the field. Improper welding can cause cracks and brittleness in heat affected area's which result in weakening of the part and possible failure. Forgings should never be welded.

Personnel Training

All personnel performing installation, operations, repair, or maintenance procedures on the equipment, or those in the vicinity of the equipment, should be trained on rig safety, tool operation, and maintenance to ensure their safety.

WARNING: Personnel should wear PPE's during installation, maintenance and operations.

Contact the NOV training department for more information about equipment operation and maintenance training.

Recommended Tools

Service operations may require the use of tools designed specifically for the purpose described. NOV recommends that only those tools specified be used when stated. Ensure that personnel and equipment safety are not jeopardized when following service procedures or using tools not specifically recommended by NOV.

Replacing Components

Verify that all components (such as cables, hoses, etc.) are tagged and labeled during assembly and disassembly of equipment to ensure correct installation. Replace failed or damaged components with NOV certified parts. Failure to do so could result in equipment damage or injury to personnel.

Routine Maintenance

Equipment must be maintained on a routine basis. See the Users Manuals for maintenance recommendations.

WARNING: Failure to conduct routine maintenance could result in equipment damage or injury to personnel.

Proper Use of Equipment

NOV equipment is designed for specific functions and applications, and should be used only for its intended purpose.

Lifting

The lifting procedures should carefully be observed and carried out according to the Original Instructions / Users Manuals.

Limitations

The tools are designed to be used in the gas and oil well drilling environment, and must not be used for any other purpose.

Abbreviations

Abbr.	Explanation	Abbr.	Explanation
AO	Air Operated	m	meter(s)
CL	Center Latch	mm	millimeter(s)

Conversions

Metric conversions through-out this handbook conform to the Systeme Internationale (SI) metric equivalents.

Metric to US

inches = millimeters / 25.4

feet = meters / 0.3048

pounds = kilograms / 0.4536

ounces = kilograms / 0.0283

sTon (short ton) = Metric Ton / 0.9072

US to Metric

millimeter (mm) = inches x 25.4

meter (m) = feet x 0.3048

kilogram (kg) = pounds x 0.4536

kilogram (kg) = ounces x 0.0283

metric Ton (Tonne) = sTon x 0.9072

POWER TOOLS

HK20000 POWER CASING TONG

The HK20000 power casing tong is a tool designed for making up and breaking casing.

The rotor support design has the cam followers attached directly to the rotor, providing support for a smooth and quiet operation. A priority 4-way valve minimizes possible gear train damage. The power assisted gear shift assures efficient operation. Accommodations for torque return are standard. A load cell and torque guage are available as accessories. A two-speed gear box uses a cluster gear, high and low speed gears and pinion shaft. The single door design is simple to operate and has fixed guide support for the rotor. The door interlock system increases safety as the tong will not rotate with the door open. A single hanging bar arrangement is easier to adjust and provides maximum clearance making the HK20000 power casing tong safe to work with.

TECHNICAL SPECIFICATIONS

Description	Imperial	Metric
Size range	4" – 14"	102-356 mm
Torque low gear	20,000 ft.lbs @ 2300 psi	27,000Nm @ 15,857 kPa
Torque high gear	4,900 ft.lbs @ 2300 psi	6,650 Nm @ 15,857 kPa
Maximum intermittent torque	25,000 ft.lbs @ 2,500 psi	34,000 Nm @ 17,237 kPa
Rpm in low gear	17 rpm	17 rpm
Rpm in high gear	70 rpm	70 rpm
Power requirements: Volume	66 gpm @ 1,000 psi	250 ltr/ min @ 7,000 kPa

SSW30 HYDRAULIC SPINNING WRENCH SSW40 PNEUMATIC SPINNING WRENCH

The hydraulically powered SSW30 can spin drill pipe and drill collars from 2.7/8" to 9.1/2" O.D. with no adjustments necessary. Its abundant power will bump up shoulders tight enough so each joint is quickly torqued.

This lightweight tool is narrower and has lower profile than previous spinning wrench designs. It achieves its compact shape by using one large cylinder for clamping.

The pneumatically powered SSW40 can spin drill pipe and drill

An easy adjustment screw eliminates the need to change rollers and can accommodate drill pipe and drill collars from 3.1/2" to 9.1/2" OD. The speed of the SSW40's four drive rollers, powered by two motors, is precisely controlled by the operator to permit the slow walking in of drill collars or fast spinning in or out when tripping pipe.

KS6600 PNEUMATIC KELLY SPINNER KS6800 HYDRAULIC KELLY SPINNER

The KS6600 and KS6800 Kelly Spinners can be used for rotating drill pipe slowly, for limited rathole and mousehole drilling and making fast kelly connections. These units are completely reversible; the driller can spin-out, as well as spin-in, when making connections, therefore, spinning chains are not required.

TW61 HYDRAULIC TORQUE WRENCH

The NOV TW61 hydraulic torque wrench makes-up and breaks-out drill pipe and drill collars from 4" to 8.1/2" OD. Torque is adjustable and can be pre-set to the required value. Upper and lower gripping structures provide the required torque. The TW61 wrench can rotate the tool joint pin up to 34°, to produce the desired torque while providing its own back-up. A built-in tugger is provided to pull the TW61 wrench back out of the way while lowering or raising pipe stands. The tugger can also be used to assist in pulling the TW61 wrench to a storage position. The tool has 6-foot vertical travel.

TECHNICAL SPECIFICATIONS

Description	Imperial	Metric
Size	4" - 8.1/2"	102-216 mm
Make-up Torque	63,000 ft.lbs	85,000 Nm

HYDRAULIC POWER UNITS & CONTROL PANELS

HYDRAULIC POWER UNIT

HKB (CE + ATEX EXPLOSION PROOF) power units

Since the introduction of the HKB35 and HKB66 hydraulic power units, NOV has continuously worked towards improving the efficiency, reliability and safety of these designs. This expanded product range will respond to the industry demands for reliable easy maintenance power units built according to ATEX-rules (Explosion Safety) for safer operation.

HKB FEATURES

- Variable displacement piston pump which stops the flow at maximum pressure to prevent unnecessary heating up of the oil.
- A power compensator is mounted to prevent an overload of the electric motor
- Automatic temperature control. The cooler starts automatically at an oil temperature inside the tank of 38°C (100°F). The unit automatically shuts down if the oil temperature inside the tank reaches 70°C (158°F)
- Automatic oil level safety. Unit automatically shuts down if the oil level inside the tank is too low.
- Pressure and return connections with quick disconnect couplings
- Electric powered
- Skid mounted unit can be lifted using a forklift or crane
- HKB units can be lifted using a forklift or a crane.
- Maximum pressure 2500 psi (175 bar)
- Return line equipped with contamination indicator

OPTIONS

- Available in various pressure and flow configurations
- Available for standard, arctic and desert ambient temperatures.
- Available in 50 or 60Hz, from 360 to 480 Volts. Other supply power on request.
- Diesel HKB's on request.
- Available with remote starter kit
- Available HKB140D dual pump with a secondary pump for 100% redundancy.
- Air-over-Hydraulic Power Unit HKB3

ATEX: EXPLOSION SAFETY

- HKB units are built according requirements of the European directive EN 982 and EN 94/9/EC for use in potentially explosive atmosphere.
- Standard ATEX compliance according to Ex II 2G T3 EEx-e IIB T3 for use in zone 2 (category 3) as a minimum.

FLOW AND PRESSURE

- Fixed pressure - Fixed flow (standard)
- Fixed pressure - Adjustable flow
- Adjustable pressure - Adjustable flow
- Adjustable pressure - Fixed flow

AMBIENT TEMPERATURE

- -10° to +40°C (standard)
- 0° to 50° C (Desert)
- -40° to + 10°C (Arctic)

POWER SUPPLY

- 360 up to 480 V
- 50 or 60 Hz

HKB3 POWER AIR-OVER-HYDRAULIC POWER UNIT

The HKB-3 unit is an air driven hydraulic power unit which supplies hydraulic fluid under pressure to the FMS.

PART NUMBERS HKB3

- 50007090 HKB3
50007091 HKB3 with remote control

HYDRAULIC STAND ALONE CONTROL PANEL BX/BXS

Portable fully hydraulic control panel to operate BX and BXS tools through a portable service loop. Also suitable to operate the BX universal rotator.

The panel is suitable to operate the following rotary spiders/slips: FMS275, FMS375, PS21, PS30 and hydraulic Elevator / Spiders 14" & 24".

The panel has an interlock function between the elevator and the rotary spider (except FMS275 which can not be interlocked due to the lack of a Xp-signal).

TECHNICAL SPECIFICATIONS

Weight & Dimensions of Panel

Weight Stand Alone Control Panel [lbs/kg]	450 / 200
Dimensions Overall: Height x Width x Depth [inches/mm]	47.5 x 27.6 x 19.7 / 1210 x 700 x 500

Weight & Dimensions of Service Loops

Service Loop is suitable for BX 3, 4 and 5 and BXS .	
Service Loop is suitable for Universal Rotator (Single Arm, pn 50004130) ONLY	
Length (Coupling to Coupling) [ft/m]	197 / 60
Weight (Oil filled) [lbs/kg]	800 / 365
Service Loops is supplied with two loop hanger assemblies to provide interface point to the Derrick (via Tugger) and the Top-Drive (RLA Link-ear or other suitable attachment point).	

MAIN PART NUMBERS

Part number	Description
50000350	Control panel assembly
50000360	Service loop

OPTIONAL EQUIPMENT PART NUMBERS

Part number	Description
50000350-13	1 year spares for control panel and service loop
200977-8	Hose kit for FMS375
50005249	Hose kit for FMS275
50008610-21	Hose kit for PS21
50008610-30	Hose kit for PS30

FMS CONTROL PANEL

The FMS is connected to the panel by applying two hoses between the FMS and the two quick disconnect couplers (Slips up, Slips down) on the panel.

On the extra connections of the control panel (Pressure power tong, Return power tong) a power tong or secondary tool can be connected by using hydraulic hoses. This tool also needs to be an open center system.

The panel allows to control both the FMS and power tong. No power fluctuations will occur, allowing a consistent operation and reliable torque read out.

TECHNICAL SPECIFICATIONS

Hydraulic characteristics

Maximum pressure [psi/kPa]	3,000 / 20,684
Maximum flow [gpm/lpm]	50 / 190
Pressure at "pressure power-unit" connection [psi/kPa]	2,600-3,000 / 17,926-20,684
Back pressure at "return power unit" connection [psi/kPa]	0-200 / 0-1,378
Power unit flow range [gpm/lpm]	5-50 / 19-190
Pressure on "slips down" connection [psi/kPa]	1,300-2,450 / 8,963-16,892
Standard settings on "slips down" connection [psi/kPa]	1,800 / 12,410
Pressure on "slip up" connection [psi/kPa]	1,000 / 6,894
Max. output flow to FMS [gpm/lpm]	15 / 57
Output flow to pressure power tong	When the FMS slips are travelling; no flow is available. With the FMS stationary, see power unit flow range (minus leakage flow)
Nominal volume of accumulator [gallon/l]	0.18 / 0.7
Nitrogen pre-charge pressure [psi/kPa]	1,960 / 13,513
Maximum accumulator pressure [psi/kPa]	3,000 / 20,684

Pneumatic characteristics

Pressure at air pressure connection [psi/kPa]	90-230 / 620-1585
Air flow [gpm/lpm]	396 / 1,500

Dimensions and weight

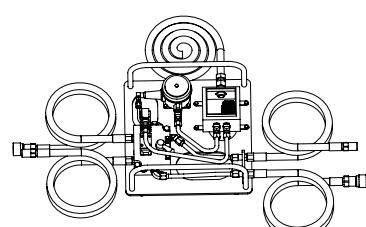

Dimensions (L x W x H) [inches/mm]	29.53" x 22.83" x 21.65" / 750x580x55
Weight [lbs/kg]	265 / 120

MAIN PART NUMBER

Part number	Description
50006538	Control panel

FMS375 INTERLOCK ASSEMBLY

By using the FMS375 interlock assembly, it is possible to create an interlocking between an elevator (providing this elevator also has the possibility for interlocking). No need for an additional control panel is needed except for the standard panel P/N 50006538.

MAIN PART NUMBER

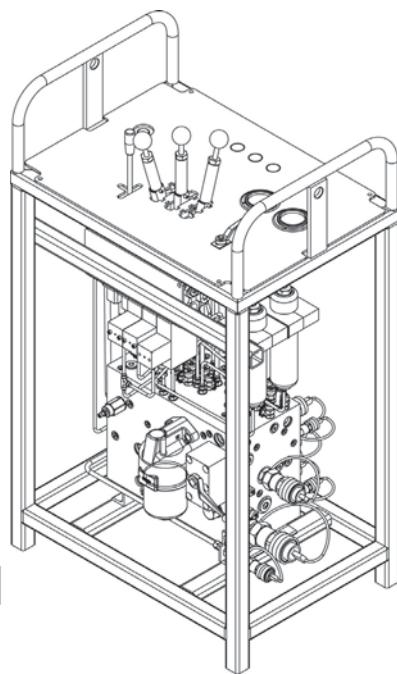

Part number	Description
50008225	FMS375 Interlock Assembly

CRT350/500 INTERLOCK PANEL

The CRT350/500 operator control panel contains all required valves and control handles to remotely operate the following tools:

- The CRT350 Casing Running Tool
- The CRT500 Casing Running Tool
- The CRT350 Casing Running Tool hydraulic single joint elevator (H-SJH)
- The CRT500 Casing Running Tool hydraulic single joint elevator (UX)
- The hydraulic rotary slips like FMS Flush Mounted Slips

The control panel connects to both the CRT350/ and the CRT500 and it's hydraulic single joint elevator H-SJH/UX (via the service loop) as well as the hydraulic rotary slips.

TECHNICAL SPECIFICATIONS

Dimensions and weight

Dimensions (L x W x H) [inches / mm] 27,6 x 19,7 x 47,5 / 675 x 500 x 1206

Weight [lbs / kg] 450 / 204

50008610-30	Hose kit for PS30

DYNAPLEX HOOKS

DYNAPLEX HOOKS

The Dynaplex hook is a premium-quality rotary hook for heavy-duty drilling requirements. Special features: hydraulic snubber, flexible pin connection and hook positioner. The hook positioner provides faster, safer operation and cuts down round-trip time. When going in the hole, the positioner automatically rotates the elevator into the correct position for the derrickman to catch the next stand of pipe. The positioner also prevents the hook and elevator from being rotated by the "spin-up" of drill pipe going in the hole. Operators may desire to direct-connect the Dynaplex hook to the traveling block.

DYNAPLEX HOOKS

LINKS

LINKS

WELDLESS LINKS

Weldless links are forged from a single piece of high-grade alloy steel to provide maximum tensile strength. More weight and "plus-diameter" in critical areas make these links extra strong. Short upper eye design means better balance and easier elevator handling, while reducing wear of the eye section against the swivel bail or body.

Weldless links 2.1/4" - 3.1/2"

Weldless links 4.3/4" - 5.1/2"

PERFECTION LINKS

Dependable, efficient Perfection links are designed for light loads. They are made by forging, bending and electric welding of high-quality steel bar stock, which is then heat-treated and magnafluxed.

For loads which exceed capacity of Perfection links, Weldless links are recommended.

PART NUMBERS PERFECTION LINKS

Part number	Size [inches/mm]	Load rating per set [sTon/Tonne]	Weight per Set [lbs/kg]	Dimension X [inches/mm]
200450Y130	2 x 30 / 50.8 x 762	100 / 89.3	49 / 108	30 / 762
200450Y136	2 x 36 / 50.8 x 914	100 / 89.3	58 / 128	36 / 914
200450Y142	2 x 42 / 50.8 x 1,067	100 / 89.3	67 / 148	42 / 1,067
200450Y148	2 x 48 / 50.8 x 1,219	100 / 89.3	76 / 168	48 / 1,219
200450Y160	2 x 60 / 50.8 x 1,524	100 / 89.3	95 / 208	60 / 1,524

DC DOLLY

Efficient method of handling drill collars without having to remove the elevator from the links. The drill collar assemblies are suitable for use in combination with the perfection links. The size range is from 2.7/8" plain to 6.5/8" IEU.

ELEVATOR SELECTION CHARTS

ELEVATOR/PIPE MATCHING TOOL

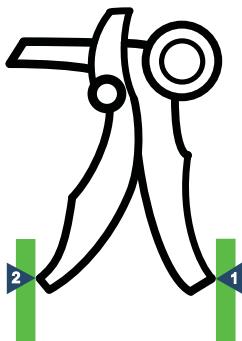

A high percentage of all dropped pipe incidents is related to selecting the wrong pipe size and/or elevator bore size.

To reduce this specific risk, NOV has developed a measuring tool that allows easy, fast and precise measurement of pipe body OD & the tool joint OD versus the elevator bore ID & the tool joint bore ID, up to 9" (229 mm).

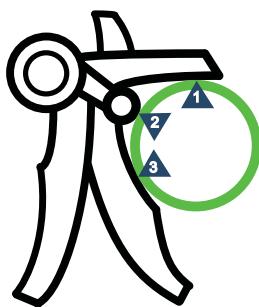

ID MEASUREMENT:

1. Insert "BoreMatch" tool into bore.
2. Spread the "BoreMatch" tool legs until the two outer tips with arrow marking make contact to bore.
3. Gently remove the "BoreMatch" tool from the bore and read the "ID".

OD MEASUREMENT:

1. Extend the "BoreMatch" tool around the pipe.
2. Push the "BoreMatch" tool against the pipe until the two legs and the center tip with arrow marking make contact with the pipe.
3. Gently remove the "BoreMatch" tool from the pipe and read the "OD".

FEATURES AND BENEFITS:

- Proper elevator selection with specific pipe, as a result reduced risk of dropped pipe incidents
- Not sensitive to dirt (i.e. mud)
- Wear indicator for reliable measurement
- Accuracy up to 1/16 inch or 1.5mm
- Light weight — plastic components eliminate the risk of down time when dropped in hole
- Graphics recessed and applied by laser to minimize risk contrast loss
- Contrasting surface roughness to ease dimension reading
- Part Number: 10710179-001

MATCHING PIPE example:

Measure elevator bore (ID) with 2-point measurement. Readout 6 1/8".

MATCHING TOOL JOINT example:

Measure elevator T-J-Bore (ID) with 2-point measurement. Readout 8 1/4".

Measure pipe body (OD) with 3-point measurement. Readout 6".
The pipe matches with the bore.

Measure pipe T-J-Diameter (OD) with 3-point measurement. Readout 8".
The tool joint matches with the bore.

ELEVATOR BORE CHARTS

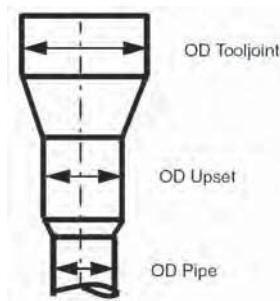

HOW TO USE THE BORE CHARTS

When ordering any elevator for drill pipe, casing and tubing, first determine correct pipe size and corresponding elevator part number from specification tables on these pages. Then determine correct bore code from bore charts on this and the following pages. Add this number to the part number for the complete elevator.

Note that the bore diagrams give bore diagrams for all elevators other than BJ 18° elevators.

18° Taper Elevator

ELEVATOR BORE CHARTS

MANUAL & AIR OPERATED ELEVATORS

MANUAL OPERATED ELEVATORS

Manual operated elevators are conventionally operated elevators for lifting all existing pipe:

- Collar type center latch A series
- 18° center latch G series
- Collar type side door X series
- Auxiliary S-series

The elevators are suitable for handling casing, tubing, plain & upset drill pipe, collar type drill pipe, 18° drill pipe, IU, EU and IEU pipe etc, depending on the type and rating.

AIR OPERATED ELEVATORS

Air operated elevators are conventional center latch elevators to which power actuation has been added. This feature permits remote opening of the elevators. All NOV elevators are designed and manufactured in strict accordance with ISO-API standard 8C.

SLIP TYPE ELEVATORS

NOV "Y" series elevators are conventional slip type elevators for handling tubing and small casing. They feature a four slip design which give an optimum contact on the pipe to prevent bottle necking and gauge damage.

SLIP TYPE ELEVATORS MYC, YC & HYC SERIES

HYC Casing Elevator

The HYC elevator is a powerful 200 sTon (181 Tonne) capacity elevator and can handle from 2.7/8" to 7.3/4" tubing or casing. The full range can be achieved with the use of 5 sets of slips for the complete range. All slips provide a full 10 1/2" (7.5/8" slip has a height of 8.625") of insert contact to firmly grip your casing or tubing. The HYC elevator as with all Type 'Y' series elevators operate with the latch lock combination for safety.

Size range and capacity:

2.7/8" through 7.3/4" (73-197 mm) OD. API rated capacity is 200 sTon (181 Tonne).

MYC Casing Elevator

With its 125 sTon (114 Tonne) capacity the MYC elevator completes the range of Y type elevators for handling either external upset or API collar type casing or tubing. The MYC elevator has a range of 3 1/2" to 7", utilizing the same slips as the YC elevator. All slips provide a full 7" of insert contact to firmly grip your casing or tubing. The MYC operates with a latch and a latch lock combination for safety.

Size range and capacity:

3 1/2" to 7" (89-178mm) OD. API rated capacity is 125 sTon (114 Tonne).

YC Casing Elevator

The YC elevator is an exceptionally versatile elevator that handles either external upset or API collar type casing simply by installing the proper size insert-type slips and slip-setting ring assembly. In addition, slips can be provided that enable the YC elevator to handle dual strings of tubing. To reduce the possibility of the elevator opening under load, a latch lock is provided in addition to the spring type-latch. The rugged, long-lasting slip inserts are easily changed when they become worn.

Size range and capacity:

3 1/2" (89 mm) through 7" (178 mm) casing. API rated capacity is 75 sTon (68 Tonne)

SLIP TYPE ELEVATORS YT, MYT & HYT SERIES

YT Slip Tubing Elevator

The YT elevator is an outstanding combination tool for use with any of the power tubing spiders. It has four slips each contacting 9' (228.6 mm) of pipe length. The interlocking slips form a circle around the tubing, assuring a uniform grip. Slip inserts are easily replaceable. Only one set of slip bodies is required to handle all tubing sizes from 1.315" (33 mm) through 3.1/2" (89 mm). A sturdy latch and safety latch lock combination holds the YT elevator securely in closed position.

HYT Tubing Elevator

The HYT elevator is designed to accommodate the widest possible range of tubing. The key is the various combinations possible with three different slip-setting rings, reducing inserts and two sizes of slips. The HYT elevator handles 2.3/8", 2.7/8" or 3.1/2" (60.33, 70.02 or 88.9 mm) OD tubing, with any type of upset and any wall thickness. The slip provides a full 12" (304.8 mm) of vertical contact on the pipe.

MYT Slip Tubing Elevator

The MYT elevator is a light-weight elevator for medium wells. It handles all tubing within its range with one set of slips, plus reducing inserts. The MYT elevator has four curved slips that form a circle around the tubing. This assures an uniform grip with minimum marking of pipe.

COLLAR TYPE ELEVATORS A SERIES

COLLAR TYPE ELEVATORS A SERIES

Center-latch elevators are for handling collar-type drill pipe, casing and tubing. All "A" type elevators are constructed in two halves of practically the same weight, providing proper balance and easier opening and closing. In open position, the elevator hangs ready for closing at any point below the upset of the pipe. All "A" type elevators feature latch and safety latch lock combinations. Safety features include operating handles to help prevent accidents to operators and an extra handle at the rear of the elevator for safer operation.

18° TYPE ELEVATORS G SERIES

G series elevators are constructed in two halves of practically the same weight for better balance, making them easier to handle; easier to latch on and take off the pipe. In open position, a G series elevator hangs ready for closing at any point below the upset of the pipe. Safety features include guarded operating handles to help prevent accidents to operators and an extra handle at the rear of the elevator for easier, safer operation.

OPTIONAL EQUIPMENT PART NUMBERS

Part number	Description
15320	Balancing strap for center latch elevators

X SERIES SIDE DOOR ELEVATORS

The X-series elevators handle all sizes of collar-type tubing, drill pipe and casing.

The SMX has a patented latch & latch lock arrangement mounted on the elevator door. The handle protects the latch from accidental opening. Both latches operate from a single handle.

The SLX-elevators are offered alternatively to the SMX-elevators. They provide proven technology and economics. The SX-elevator is a mid-sized elevator with higher rating compared to the SLX and SMX, while the SLX DD elevator provides for the largest sizes.

Link handle kit

The Link handle kit can be used in combination with a SMX or other kind of Manual Elevator side-door type. It is developed for easier and safer closing the elevator. Part number 50006435. Will fit on 350 and 250 ton links.

SJL & SPL SERIES ELEVATORS

SJL and SPL single-joint, center-latch elevators are designed to replace unsafe rope slings for hoisting collar-type pipe into position. The SJL 90° elevator enables the crew to handle pipe properly, help avoid damage to pipe threads and reduce the chances of accident or injury. The SPL elevator is the same as the SJL elevator except that the SPL elevator is designed for use on tapered pipe, conforming to API specifications for extreme line casing.

*Not to be used when rotating with load.

SBX7, SJX & D-SJX SERIES ELEVATORS

The SBX7 elevator is a solid body elevator with one manually operated door for high loads up to 1,250 sTon. The elevator is suitable in combination with the standard BX7 bushings (see elsewhere in this catalog). This elevator is designed for (ultra-) deep water drilling rigs.

The SJX single joint elevator is designed for running single joints of tubing and casing from V-door to well center. It is double hinged for use with the CRT Casing Running Tool, or any other stabberless operation. Ergonomically designed handles with cast on stop pins prevent the lifting sling shackles from pinching hands.

The D-SJX elevator is the heavy duty version of the SJX elevator, capable of handling doubles and triples up to 12 STon / 10.9 Tonne

SJH SERIES MANUAL ELEVATOR

The SJH horizontal pick up elevator is designed to pick up tubulars lying flat on a surface without having to lift the tubulars prior to closing the elevator. The elevator is capable of lifting drill pipe, recessed/zip lift drill collars and casing. It will handle single joints of pipe straight from cantilever to off-line stand building systems.

HYDRAULIC ELEVATORS

BX HYDRAULICALLY ACTUATED ELEVATOR AND UNIVERSAL ROTATOR

BX 3,4,5 & 7

- Designed for hydraulic actuated operation
- Cost competitive and economic with normal rig complement of air-operated, drill pipe, drill collar and casing elevators.
- Double door design for optimal balance and performance.
- The hydraulic cylinders are located inside the body casting for clean lines and maximum protection, and yet they are accessible for normal maintenance.
- Changeable bushings allow one elevator frame to handle all pipe size and type requirements.
- Bushings are locked into place with spring loaded pins for quick, easy removal and installation.
- Bushings can be changed within 5 minutes.
- No special tools are needed, no loose nuts, bolts or pins.
- Hinge journals are bushed to put major wear into replaceable components.
- One door bushing is spring loaded with linkage connecting it to a locking pin. Any load on this bushing segment engages the pin preventing the elevator from opening. This safety lock prevents the elevator from opening under load.
- Latch valve eliminates any faulty signals.
- The elevator is prepared for an interlock system as an option when used with a power slip.
- A trigger mechanism initiates the closing sequence when pipe is thrown into the elevator.
- Additionally equipped with a rotary actuator and can be tilted to pick up pipe from the V-door, eliminating the need for single joint elevators.

BXS-SLIP TYPE

- Designed for hydraulic actuated operation.
- Cost competitive and economic with normal rig complement of air-operated casing elevators.
- Double door design for optimal balance and performance.
- The hydraulic cylinders are located inside the body casting for clean lines and maximum protection, and yet they are accessible for normal maintenance.
- Movable replaceable slips allow one elevator frame to handle multiple pipe sizes with no or very small external upset or load shoulder.
- Easy slip exchange.
- No loose nuts, bolts or pins.
- The safety lock prevents the elevator from opening under load.
- Latch valve will prevent any false signals
- The elevator is prepared for an interlock system as an option when used with a power slip.
- Additionally equipped with a rotary actuator and can be tilted to pick up pipe from the V-door, eliminating the need for single joint elevators.

UX-HORSE SHOE

- The hydraulic UX single joint horizontal pick up elevator, is designed to pick up tubulars lying flat on a scaffold/raised support beam without having to lift the tubulars prior to closing the elevator.
- The elevator is capable of lifting casing.
- It will handle single joints of pipe straight from cantilever to off-line stand building system, and is used underneath the CRT350/500 casing running tool as for picking up tubulars from the V-door.
- After picking up the pipe, the pipe weight is transferred to the top collar plate.
- The jaws do not carry the vertical load.
- The jaws are delivered in sets and cover the range from 4.1/2" - 20".
- The top collar plates and bottom guides must be ordered separately.

H-SJH-TYPE

- Hoist joints and/or stands of tubulars (drill pipe, casing or tubing) during the stand building operations of the total CRT350.
- Pick up single tubulars from the V-door or the catwalk (pipe deck) and hoist them into the derrick and vice versa.

UNIVERSAL ROTATOR

- Hydraulic actuated operation.
- Strong, reliable, economic.
- Single hydraulic line required for rotation, accumulator actuated return movement.
- The hydraulic cylinder is located inside the body for clean lines and maximum protection.
- No loose nuts, bolts or pins.
- Easy adjustment of angle.
- Safe and reliable picking up pipe from the V-door, eliminating the need for single joint elevators.

Description

Min Pressure [psi/kPa]	2,000 / 13,789
Max Pressure [psi/kPa]	2,500 / 17,236
Flow rate [gpm/lpm]	5 / 19
Hydraulic lines	3 @ 1/2" w/o rotator 5 @ 1/2" w/ rotator

ROTATORS

The rotator is a tool designed for rotating the BX series elevators, used e.g. when picking up a pipe from the V-door. The rotator is hydraulically driven via the rotating head and is operated via the driller's console. The float function enables the elevator to follow a changing pipe angle without any interference of the operator, as the float command overrides all manual rotator commands. Especially for BX4 i.c.w. TDS-11 top drives, a narrow type is available.

HYDRAULIC PICK UP ELEVATOR

The hydraulic SJH and UX single joint horizontal pick up elevator, designed to pick up tubulars lying flat on a surface without having to lift the tubular prior to closing the elevator. The elevator is capable of lifting casing with a lifting collar or nubbin. It will handle single joints of pipe straight from cantilever to off-line stand building system, and is used underneath the CRT350 Casing Running Tool (H-SJH) and CRT500 Casing Running Tool (UX) as a standard for picking up elevators from the V-door. The jaws are delivered in sets and cover the range from 4.1/2" - 20". For the CRT350 Casing Running Tool the size 9.5/8" is the maximum.

HYDRAULIC ELEVATORS

FMS + ELEVATOR / SPIDERS

VARCO / BJ TYPE ELEVATOR/SPIDERS & FMS FLUSH MOUNTED SLIPS

Elevator/Spiders

The elevator/spider tool is designed for lifting and suspending tubular goods, from light tubing to heavy wall pipe and drill collars. The main body of these units can be dressed as a casing elevator or as a spider. The upper unit is dressed as an elevator, using a bottom guide and a bell guide. The lower unit is dressed as a spider, using a top guide to aid in centering the casing. The elevator is attached to the derrick traveling block and hook with 250, 350, 500, 750 & 1,000 Tons standard Varco weldless links. The spider can be placed directly on the master bushing or rotary, assuming flat and sufficient contact surface is assured. If the rated load capacity of the rotary table is less than the capacity of the elevator/spider, or if the rotary table surface is not flat, a NOV adapter plate may be used. The elevator/spider tools are available air operated as well as hydraulic operated. See below overview.

FMS Flush Mounted Slips

The FMS275/375 is a hydraulic operated power slip which is equipped with replaceable slips and insert carriers to handle casing. The power down force generated allows the FMS to take the torque reaction of the tong when the string weight is not sufficient to resist rotating and eliminates the need for a manual casing tong. The powered down slips allow the first casing joints to be run in with the FMS. The FMS is mounted flush with the rig floor, allowing the casing connection height to be lowered 1 meter (3 feet), thus eliminating the need for scaffolding. The rig crew also has more room to work by removing the spider body from the top of the rig floor. The FMS can be used in combination with the rotary support table. The slips will set or raise when a command is given by the driller. Setting and raising slips of the FMS is remote controlled. By detecting the signal-line pressure from the FMS it is determined that the FMS slips are set. The FMS is available in 2 sizes: the FMS275 (2.3/8" - 7.5/8", 250 sTon) and the FMS375 (4.1/2" - 14", 500 sTon). The NOV FMS275 utilizes the full range of slip assemblies and bottom guides, 23/8" to 75/8", as used in the existing BJ type 250 sTon elevator/spider. In addition, special designated slips will give the FMS275 its maximum 250 sTon capacity. The FMS375 utilizes the full range of slip assemblies and guides, 41/2" to 14", as used in the 500 sTon elevator/spider. The FMS375 is provided with standard rotary locks in case the rotary torque needs to be transmitted to the casing string.

POWER SLIPS

PS21 AND PS30 HYDRAULIC POWER SLIP

Installs flush with the drill floor

The PS21 and PS30 hydraulic power slips improve both safety and rig efficiency as proven with the FMS Flush Mounted Slip. Proven technology gives optimal performance, high safety operation, allowing to run the whole string with one tool: centralizers, couplings etc, due to enlarged throat opening.

Eliminates work platforms for stabbing and operating power tongs during casing running operations.

- Power down slips reacts up to 45,000 (PS21) on 14" casing or 55,000 ft.lbs (PS30) of torque, on 20" casing with sufficient string weight.
- Insert carriers make this a universal tool, not just another power slip
- Allows the PS21 to handle all pipe types and sizes, including BHA's, collars, drill pipe, casing and tubing from 2.3/8" to 14" and PS30 from 2.3/8" to 20"
- Quick changeover from BHA's to collars to drill pipe allows the PS21 and the PS30 to trip the entire string.
- Insert carriers can be changed with pipe in the hole.
- Carrier change can be done in 5 minutes or less.
- Special "drop and lock, pull and release" design eliminates loose pieces such as bolts and pins.
- The PS21 and PS30 can be fitted with insert bowls should it become necessary to use hand slips.
- Reliable slips-set signal
- Corrosion resistant nickel plated manifold blocks
- Integrated pressure relief valve in slip actuators
- Umbilical operations possible (optional guides available)

Like the insert carriers, the slips also have a rapid change system

- Two handles on the middle slip segment retract and lock the springloaded slip retaining pin.
- No loose parts.

Centering device

- The PS21 and PS30 are standard equipped with a centering device incorporated in the top cover.
- Ram inserts up to 7.5/8" available in stainless steel (DP only) or mild steel

Slip set-back designed to pass tool joints, BHAs and casing centralizers

- The slip set back allows tool joints and drill pipe protectors to pass without dragging on the inserts, even when drilling with 6.5/8" drill pipe.
- The PS21/30 will pass: BHA's when tripping; Centralizers when running casing.

Hook Up Kit

- A control panel, which can be located in the driller's console,
- HUK (Hook Up Kit) with integrated flushing system, greasing pump, pressure switches, dependent on customer requirements, ready for plug and play.

Control panel

- Stand alone control panels enables the driller to operate the slips. See chapter Power Tools.

TECHNICAL SPECIFICATIONS

	PS21	PS30
For rotary size	37.1/2"	49.1/2"
Pipe size range	2.3/8" to 14"	2.3/8" to 20"
Load rating	500 sTon	750 sTon
Maximum torque	45,000 ft.lbs	55,000 ft.lbs
Hydraulic requirements	PS21	PS30

PS15 AND PS16 POWER SLIPS

NOV power slips are designed to eliminate the manual lifting and setting of slips. The PS15 power slip use coil springs as a counterbalance to offset the weight of the slips when in upper, released position. Slips are set by standing on the slipset ring. The foot pedal is pressed to release the slips.

The PS16 power slip is an air operated power slip controlled with a foot valve. The slips are set by gravity and released with air pressure much like NOV's casing elevator/spiders.

PS15 and PS16 power slip features:

- Fits directly into NOV pin drive master bushings.
- Fits 27.1/2" and 37.1/2" to 49.1/2" rotary tables using adapter rings
- Accommodates 3.1/2" to 6.5/8" OD Drill pipe

PSF POWER SLIP FRAME & SLT SLIP LIFTING TOOL

PSF

The Power Slip Frame (PSF) improves drilling and tripping operations with simple, light weight, compact mechanical hydraulic slips. The slips may be operated via the hook up kit. In addition, the slips may be operated manually by foot pedal or hand operated control valve. This product does not wear CE-marking.

SLT

PSF

SLT

The Slip Lifter Tool (SLT) is a tool especially designed to be used in combination with the heavy duty MBH1250 hinged master bushing, the LSB1250 Landing String Bushing and LSS1250 Landing String Slips. The SLT operates in combination with the dedicated hook up kit. The SLT also can be used for SDHL-slips using the converting kit. It is CE-marked.

Both tools increase safety by moving personnel away from the hazards at well center during drilling operations. In addition, the design does not extend beyond the rotary table and thereby reduces trip hazards in the event of an accidental rotation of the rotary table. Crew fatigue is minimized by reducing the time and energy required for manual slip operations.

TECHNICAL SPECIFICATIONS

Description	PSF	SLT
Weight w/o slips [lbs / kg]	365 / 166	1,992 / 904
Pipe Size Capacity [inches]	2.3/8" to 7" (with simple adapters required for the range)	5.1/2" to 6.5/8" (LSS) 4.1/2" to 7.5/8" (SDHL)

BHAT BOTTOM HOLE ASSEMBLY TOOL

The BHAT Bottom Hole Assembly Tool is a tool designed for easy MU and BO of the bottom hole assembly. It allows the operator to assemble and dis-assemble the bottom hole assembly in a safe way due to built-in safety features.

The maximum rating is 150 sTon / 136 Tonne. The tool has a "no slip" design and will grip all sizes within its range (4" - 6", 6"-10" or 8"-12") without insert/size change. Throat opening 19.5", allowing 17.1/2" BHA to pass. The maximum back-up torque capacity is 50,000 ft.lbs / 67,791 Nm. The minimum required length of any individual clamping surface is 17".

Features

- The tool has a triple safety built in to prevent dropping objects. First it detects if any pipe is present in the tool. Second it measures if any pressure is set on onto the holding nuts and third it measures if any pressure is applied to the slips.
- A secondary retention system is provided to hold the pipe should the hydraulic power to the tool be lost. A spindle and lock nut design with hydraulic drive motor will provide full mechanical lock. The tool will continue to hold the pipe even with full loss of hydraulic power (once the tool has provided a positive lock signal). If the answer to all these questions is positive, only then the driller receives the signal "open elevator".
- The tool has a "no slip" design and will grip all sizes within its range without insert/size change
- The tool can be placed with an adapter plate on the master bushing and on top of the PS30.
- With adapter plate the tool can be fitted directly into the 37.1/2" rotary table opening, lowering the overall height of the tool.
- The tool uses a dedicated hydraulic system via stand alone control panel OR by using the drillers console.
- The tool is low enough so that a standard iron roughneck can still be driven over the tool to make up the DC connections.

TECHNICAL SPECIFICATIONS

Description	
Weight, dressed [lbs / kg]	6,666 / 3,000
Pipe Size Capacity [inches]	4" - 6", 6"-10" or 8"-12"
Maximum Load Rating [sTon / Tonne]	150 / 136

BUSHINGS / SLIPS / CLAMPS

CU, CUL AND CB CASING BUSHINGS

CU, CUL and CB casing bushings are inserted directly into the rotary table and insure that the casing being run is perfectly aligned with the center of the hole. Models CU and CUL are solid bushings and model CB is a split bushing. All of the bushings accept bowls of different sizes to accommodate a wide range of casing. Using CMS-XL or CP-S slips, since these bushings fit into the rotary table, the casing string can be easily rotated during cementing operations.

CASING SPIDERS

The Baash Ross 200 ton hinged casing spider will fit most casing handling operations. It can be placed on the rotary table, mounted on a platform which replaces the rotary table, or supported by cribbing, depending upon the auxiliary equipment and procedure to be followed.

Baash Ross 200 Ton hinged casing spider

UC-3 CASING SLIPS

Most casing strings' weight and the relatively thin pipe wall make it important that the supporting slips provide full circumferential grip. The Baash Ross type UC-3 slips achieves this with many narrow segments. They are hinged together to wrap around the casing and exert a more uniform pressure. With each segment carrying the same load, they automatically center the casing string within the bushing or spider. The UC-3 has a 3" taper. With changes in the number of segments and liners, it will handle strings from 16" OD to 42" OD. Liners are held in place by a liner retainer key and cotter pins.

ROLLER KELLY BUSHINGS

HDP ROLLER KELLY BUSHING

Widely recognized as the standard of the industry. For master bushings with 25.3/4" pin circle 27 HDP of 23" pin circle, 20 HDP. Unit comes with wrench, wiper and wear gauge. Weight 1,500 lbs / 680 kg.

27 XHDP ROLLER KELLY BUSHING

For extreme high-torque drilling. Essentially two HDP bushings combined into one unit, this tool reduces wear to kelly and itself through wider force distribution. For master bushings with 25.3/4" pin circle. Unit comes with wrench, wiper and wear gauge. Weight 2,850 lbs / 1,293 kg.

HDS ROLLER KELLY BUSHING

For heavy duty square drive applications. Components are interchangeable with HDP. Unit comes with wrench, wiper and wear gauge. Weight 1,420 lbs / 644 kg.

For 49.1/2" Rotary Table P/N 16953

MPCH MASTER BUSHING

The 37.1/2" MPCH pin drive hinged master bushing is specially designed for floating and semi-submersible drilling operations.

With insert bowl No. 3 and optional insert bowls No. 1 and No. 2, the MPCH master bushing will handle 2.3/8" to 13.3/8" OD drill collars, tubing and casing.

Unit comes complete with No. 3 insert bowl, bit breaker adapter plate and 4 way lifting sling PN 6699.

Part	P/N	Weight [lbs/kg]

MSPC MASTER BUSHING

The 27.1/2" MSPC solid body pin drive master bushing designed for all drilling operations. The pin drive allows the kelly bushing to ride on top of the rotary table and permits extended bowls to be used for better slip back up. With the extended API insert bowl No. 3, the MSPC master bushing will handle 2.3/8" thru 8.5/8" OD drill pipe, drill collars, tubing and casing. Insert bowl No. 2 can handle tubulars from 9.5/8" to 10.3/4" OD; while insert bowl No. 1 is good for 11.3/4" to 13.3/8" OD. Unit comes with No. 3 insert bowl, bit breaker adapter plate and 4 way lifting sling PN 6699.

MSP MASTER BUSHINGS

MSP 27.1/2" split pin drive bushings*

MSP 27.1/2 split pin drive bushings are also available. With the larger rotary opening the standard No. 3 extended API taper is used. This allows the use of extra-long SDXL slips required for heavier loads. Weight 1600 lbs / 726 kg.

MBH1250 HINGED MASTER BUSHING

For the safe handling of heavy weight casing strings, including bit, in combination with the corresponding landing strings, a new series of rotary equipment, having a dedicated rating and safety factor, has been developed.

- Casing sizes up to 24", for string weights up to 750 sTon.
- 5.1/2" to 6.5/8" landing strings with dedicated drill pipe, string weights up to 1,250 sTon.
- Dual upset drill pipe, string weight up to 1,250 sTon.
- All standard pipe types and sizes with special #1, #2 and #3 master bushing bowls, string weights up to 750 sTon.
- Standard bit breaker plates. Maximum bit diameter 29.1/2".

CASING BUSHINGS

Height and internal diameters/tapers of casing bushing are 100% identical to standard NOV Varco BJ 24" CB16542 casing bushing. Interfaces with standard 24" CMS-XL casing slips.

MBH1250 with drilling bowl and slips

MBH1250 with drilling bowl

MBH1250 with LSB1250 landing string bushing and LSS1250 landing string slip

LSS1250 landing string slip

LSB1250 LANDING STRING BUSHING

To handle 1,000 sTon capacity landing strings, the MBH1250 can be dressed with the LSB1000 landing string bowl. Combined with the special design landing string hand slips, the landing string can be run up to loads of 1,000 sTon. The landing string slips grip the pipe with standard inserts. Customers should always perform a crushing load calculation to determine the ultimate safe working load of the system.

To handle 1,250 sTon capacity landing strings, the MBH1250 can be dressed with the LSB1250 landing string bowl. Combined with the special design landing string hand slips, the landing string can be run up to loads of 1,250 sTon. The 1,250 sTon capacity can only be achieved with landing strings with "dual upset" connections, i.e. the joint has two 18 degree tool joints. A 1,250 sTon capacity BX style elevator will be connected to the upper tool joint, while the lower tool joint is suspended in the LSB1250 with the special slips that have an 14 degree contour in the slips, rather than inserts.

TECHNICAL SPECIFICATIONS

Description	Size
Size	Fits into 49.1/2" National rotary table (= 49.1/2" RST) as standard.
Height	20" (equal to a standard 37.1/2" MPCH Master Bushing)
Internal throat opening	30"
Maximum backup torque	500,000 ft.lbs / 677,910 Nm
Load Rating axial	1,250 sTon / 1,134 Tonne
Load Rating axial w/ spreading load 1:6 taper	1,000 sTon / 907 Tonne
Lifting slings	Can be handled (lifted) with standard lifting slings with certified latching hooks or standard certified shackles.

ROTARY SLIPS, CASING SLIPS

SDS, SDML, SDXL and SDHL rotary slips

SDS, SDML, SDXL and SDHL rotary slips are for use in API standard insert bowls. Featuring better contact and distribution of load on drill pipe through a superior wraparound configuration and unique insert design, these slips prevent bottle necking and gouging damage. The buttress design of the body segments provides great strength while minimizing weight for ease of handling.

⚠️ WARNING: SDXL type hand slips are not to be used on floating drilling vessels / installations. Use SDHL type hand slips instead.

CMS-XL extra long multi-segment casing slips

Today's deeper drilling calls for long and heavy casing strings. NOV has slips to handle any casing job.

Varco CMS-XL slips are manufactured from castings, reinforced to take severe service. The self-centering full wraparound grip prevents damage to casing. With certain simple adjustments, the CMS-XL can accommodate casing from 6.5/8" to 30" OD. All NOV slips have an API taper of 4"/ft on the diameter.

DCS drill collar slips

Each slip segments are castings with an extra long back to provide maximum support to the circular button gripping elements. Full wraparound design and circular buttons assure positive holding and slip setting. Drill collar slips are flat on top to accommodate the MP clamp. All NOV slips have an API taper of 4"/ft on the diameter.

FLEX HANDLES

Available for all Varco BJ rotary hand slips (SDS, SDML, SDXL and SDHL).

Can be assembled on rotary hand slips without any modification.

Protection horn on top of the handle provides guard to crew hands, should elevator be lowered too much.

The elastomer section allows the handle to bend. Handle will recover to its original shape.

Reduces bend and broken handles. Bent handles do not give crew hands an ergonomically lifting position.

MULTIPURPOSE SAFETY CLAMP

Safety clamps are a convenient way to secure flush tubular products during installation. The MP clamp can act as the last resort, when a piece of tubular slips through the slips. Especially in combination with handslips, the clamp will land on top of the slips, adding extra push down force to the slips and thus stopping the tubular from slipping through the slip.

WARNING: The MP clamps should NOT be used for snubbing or lifting operations.

BUSHINGS / SLIPS / CLAMPS

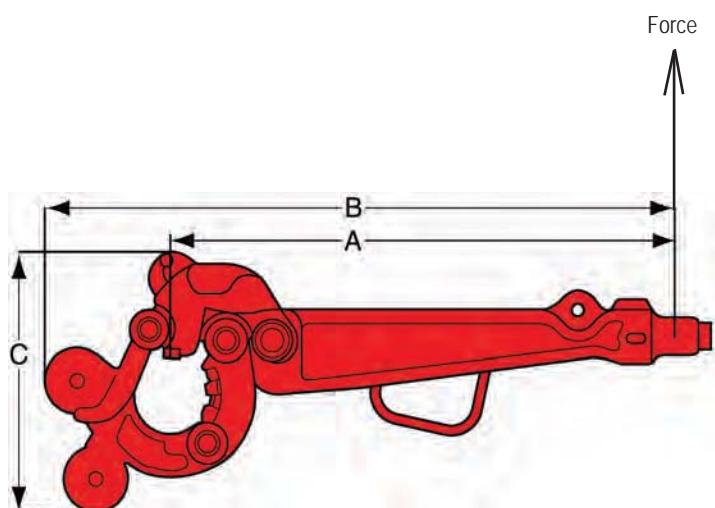

MANUAL TONGS

MANUAL TONGS

The HT tong is a tool designed for making up and breaking connections of tubular goods, from light tubing to heavy wall pipe and drill collars. There are 7 types, varying in torque capacity from 10,000 to 200,000 lbs / ft (13,560 - 271,000Nm). Covered sizes from 2 3/8" to 17 ", or 36" (HT50 with extended reach).

Interchangeable lug jaw design permits each tong to handle different sizes of pipe. By installing hinge jaws (available for some models), bigger pipe sizes can be handled.

The tongs can be assembled for either making-up or break-out by removing the hanger and turning the complete HT tong over.

9	Hinge jaw ass'y F	1	-	-	-	2	4	1	200606-1

* Note: It is possible to combine the number of jaws. One doesn't need to purchase a casing head tong for each size.

Example 1: When purchasing pn 200600-4 (30" - 31.1/2") comprising 4 x pn 200604-1 and 2 x pn 200605-1, one can assemble pn 200600-5 (31.1/2" - 33") comprising 3 x pn 200604-1 and 2 x pn 200605-1, however, one needs in this case also 2 x hinge jaw pn 200606-1.

Example 2: When purchasing pn 200580-8 (24" - 25.1/2") comprising 2 x pn 200584-1, 1 x pn 200585-1 and 2 x pn 200586-1, one can assemble pn 200580-7 (21.1/2" - 23") by leaving out 1 x pn 200586-1.

MANUAL TONGS

CASING RUNNING TOOLS

CRT350 & CRT500 CASING RUNNING TOOL

The CRT introduces step change in the way casing is run today. By combining the functionality of field proven tools such as the top drive, flush mounted slip (FMS), fill and circulation tool and hydraulic single joint elevator (H-SJH & UX), casing operations are now safer, faster and more efficient. The CRT, which is connected directly to the top drive main shaft, hoists and lowers casing, spins in and makes up the casing connection. Additionally, while reciprocating and rotating the casing string, the CRT has the ability to fill-up and circulate.

Safety

- Eliminates stabbing-board operations (leading contributor to LTA's while running casing), less manual handling in the V-door and fewer safety hazards.
- Power casing tong operations and work platforms have been removed, allowing for better ergonomics and work space around the well center.

Economics

- Drilling contractors or a reduced casing crew can run the casing, minimizing stand-by costs associated with weather or problematic well conditions.
- The CRT integral compensator substantially reduces the risk of damage due to cross-threading.
- Utilizing the top drive to control make-up reduces thread damage during the complete make-up cycle.

Well Improvements

- Assures that the casing can be set to the casing point with the ability of the CRT to push casing to bottom, fill, circulate, rotate, and reciprocate.
- Reduces the risk of differential wall sticking.
- Ability to pressure test.

Efficiency

- Less equipment to rig up; the CRT contains the single joint elevator, rigid link hoist and stabbing assembly, fill and circulation tool, and compensator in one assembly.
- Single load-path design eliminates links.
- The operator determines and controls the running/tripping speed, spin-in and make-up torques.
- When running mixed strings, size of components can be changed within minutes through the twist lock design.

Features CRT Compensator

- Employs a patented cushioned weight compensator which balances out the weight of CRT.
- Soft stabbing and thread compensation minimizes casing thread damage.

CRT Pipe Sensor

- The pipe sensor detects the casing coupling so slips will set automatically at the correct position, ensuring casing connection integrity.
- Provides feedback to CRT operator that the correct CRT stabbing height is reached.

CRT Fill-up and Circulation Tool

- Fill-up tool enables fast change out of seal and guide elements when mixed strings are run.
- Prevents possible spills of expensive fluids.
- Reduces the risk of environmental incidents.

Single Joint Elevators

- Hydraulic operated SJ-elevator (H-SJH & UX)
- Hydraulic cylinder assembly to tilt the H-SJH elevator to the V-door.

CRT350 with H-SJH elevator

CRT500 with H-SJH elevator

TECHNICAL SPECIFICATIONS CRT350

Description	Value
API 8C Load Rating [sTon/Tonne]	350 / 317
Casing Size	4.1/2" to 9.7/8"
Fill-Up and Circulation	4.1/2" to 9.7/8" circulation and fill-up (fill-up, circulate, and recovery over the full range)
Maximum Mud Circulation Pressure [psi/kPa]	up to 5,000 / 34,474 (size dep.)
Rotational speed [rpm]	0-20 intermittent
Weight (fully dressed, typical) [lbs/kg]	10,500 / 4,785
Maximum Push Down Force [lbs/kg]	20,000 / 9,072 (static)
Temperature Range [°C/°F]	-20° to +55° / -4° to 131°
Maximum Torque [ft.lbs / Nm]	35,000 / 47,453
Shaft connection	6.5/8" API RH (box), 7.750" OD TJ.
Diameter of CRT body	32"
Width of CRT ass'y	44.3"
Height*	117" (compensator mid stroke, from shaft shoulder + CRT bell guide)
Height	139.8" (link arm fully in, from shaft shoulder to H-SJH)

MAIN PART NUMBERS

Part number	Description
50008500Y*	CRT350 Casing Running Tool
50008610	Independent Control Panel
50008551	Portable service loop

TECHNICAL SPECIFICATIONS CRT500

Description	CRT500-14
API 8C Load Rating [sTon/Tonne]	500 / 454
Casing Size	4.1/2" to 14"
Fill-Up and Circulation	4.1/2" -14" Circulation / Fill-up & recovery over the full range.
Maximum Mud Circulation Pressure [psi/kPa]	up to 5,000 / 34,474, size dependant
Rotational speed [rpm]	0-20
Weight (fully dressed) [lbs/kg]	17,636 / 8,000
Maximum Push Down Force [lbs/kg]	40,000 / 18,100
Temperature Range [°C/°F]	-20° to +55° / -4° to 131°
Maximum Torque [ft.lbs@psi / Nm @ kPa]	55,000 @ 2,500 / 74,570 @ 17,236
Shaft connection	7.5/8" API RH (box), 8.625"OD TJ.
Diameter of CRT body	40"
Width of CRT ass'y	53.5"
Height*	146.4"
Height	166.8" (link arm fully in)

* Stackup length is from TDS Bell Guide to top of main shaft (w/o X-over sub)

CASING RUNNING TOOLS

ROTARY SUPPORT TABLES

RST ROTARY SUPPORT TABLE

- Smaller, lighter and more cost effective for top drive equipped rigs.
- Uses hydraulic motors directly geared to the rotary drive gear.
- Eliminates the transmission and the drive train.
- Standard hydraulic operated lock permits the table to be locked at any position, in both directions.
- Reduces the rotary skid size.
- Lower maintenance costs.
- Hydraulic dynamic slip ring allows operation of PS21/30 power slip without manually breaking/making hydraulic connections, except RST755 + False
- Central lubrication system allows easy greasing of all moving RST-parts.
- Maximum back-up torque on locks is 120,000 ft-lbs.; RST375 max. 80,000 ft-lbs.
- Can be ordered with solid or hinged adapter in size range from 37.1/2" to 75.1/2".
- External skid mounted hydraulic hook up kit (HUK) for easy maintenance.
- PS21/30 controls are included in the control station
- Recessed tracks optional
- PS Power Slip Autogreasing System available

AVAILABLE TABLES

- RST375 is available with or without slip ring
- RST495 is available with or without slip ring
- RST605 is available with or without slip ring
- RST755 without slip ring
- RST495 and 605-False without drive motors / slip ring but including the hydraulic lock for positioning of the rotary bowl. Supplied with a hook up system for the RST and the PS21/30, provided with automated greasing for both the PS and the RST.
- RST605-H is the heavy duty version of the RST605 series with increased load capacity.

*** No motors.

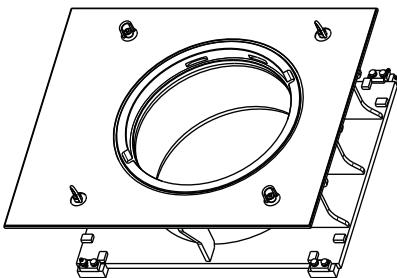

MAIN PART NUMBERS

The RST Rotary Support Tables are customer specific, hence the part numbers are unique for all tables. When ordering a Rotary Support Table, customer will be requested to specify dimensions, I/O etc.

Rotary Support Tables delivery will include the hook up kit, containing the required manifolds, greasing pumps and reservoirs.

SST STATIC SUPPORT TABLE

- SST: Static table for support purposes only, has no moving parts and does not supply hydraulic fluids.
- Accommodates existing power slips with or without adapter rings.
- To be used as a auxiliary well center location.
- Table can apply back up torque via drive lug pockets.
